Novatech Solutions 2025 Annual Risk Assessment Report

Document Version: 1.0
Report Period: January 1, 2025 – December 31, 2025
Prepared By: Risk Management & Compliance Department
Approved By: David Matthew Carter (CEO) & Jennifer Lee (COO & Security Oversight Lead)
Approval Date: January 15, 2026
Purpose: This report presents the results of Novatech Solutions' annual risk assessment, conducted to identify, analyze, and evaluate risks that may impact the achievement of business objectives, service commitments to clients, and compliance with applicable regulations. It includes an assessment of environmental, regulatory, and technological changes, fraud risks, and a risk matrix to prioritize mitigation actions. All identified risks have been formally evaluated by the Risk Management Committee.

试用水印

1. Executive Summary

Novatech Solutions conducted its 2025 annual risk assessment in accordance with ISO 31000:2018 Risk Management Guidelines and internal risk management policies. The assessment process involved stakeholder consultations (including department heads, client account managers, IT teams, and legal counsel), review of industry trends, regulatory updates, and internal operational data.

Key findings from the assessment include: (1) Three high-priority risks were identified, primarily related to regulatory changes in data privacy and technological obsolescence of core infrastructure; (2) Moderate fraud risks were identified in client billing and vendor payment processes, with existing controls deemed partially effective; (3) Significant environmental changes (e.g., global supply chain disruptions) and technological advancements (e.g., AI integration) present both opportunities and risks to service delivery.

Mitigation plans have been developed for all high and medium-priority risks, with assigned responsibilities and timelines. Low-priority risks will be monitored for changes in likelihood or impact. This report serves as a foundation for Novatech's risk mitigation strategy and will be reviewed quarterly to adapt to emerging risks.

2. Scope & Methodology

2.1 Scope

The 2025 annual risk assessment covers all core business areas of Novatech Solutions, including: (1) Client service delivery (cloud infrastructure management, cybersecurity consulting, IT support, etc.); (2) Internal operations (finance, HR, IT infrastructure, supply chain); (3) Compliance with regulatory requirements (GDPR, CCPA, HIPAA, ISO 27001); (4) Fraud prevention in financial and operational processes; (5) Impact of environmental, regulatory, and technological changes on business objectives and service commitments.

2.2 Methodology

The assessment followed a structured four-phase approach aligned with ISO 31000:2018:

1. **Risk Identification**: Conducted workshops with department heads, reviewed internal incident reports, client feedback, regulatory updates, industry publications, and technological trend analyses to identify potential risks and changes.
2. **Risk Analysis**: Assessed the likelihood (probability of occurrence) and impact (consequence of occurrence) of each identified risk. Likelihood and impact were rated on a 5-point scale (1 = Low, 5 = High).
3. **Risk Evaluation**: Prioritized risks using a risk matrix (likelihood vs. impact) to categorize risks as High, Medium, or Low priority. Risks with a combined likelihood-impact score of 12–25 were classified as High, 6–11 as Medium, and 1–5 as Low.
4. **Risk Treatment**: Developed mitigation, transfer, avoidance, or acceptance strategies for each prioritized risk, with assigned owners and implementation timelines.

All risks identified in this report have been formally reviewed and approved by the Novatech Risk Management Committee, ensuring consistency and comprehensiveness in the assessment process.

3. Risk Identification: Threats to Service Commitments & Key Changes

This section identifies risks to Novatech’s service commitments (e.g., service level agreements [SLAs] with clients, quality standards, delivery timelines) and key changes in the environmental, regulatory, and technological landscapes that may impact business operations.

3.1 Threats to Service Commitments

Novatech’s service commitments to clients include 99.9% uptime for cloud infrastructure services, 24/7 IT support response times, and compliance with industry-specific security standards (e.g., HIPAA for healthcare clients). Key threats to these commitments are:

- **IT Infrastructure Failures**: Outages or performance issues in core data center infrastructure or cloud service providers (e.g., AWS, Azure) could lead to SLA breaches and client dissatisfaction.
- **Skilled Labor Shortages**: Shortages of qualified cybersecurity and DevOps professionals could delay service delivery and reduce support quality.
- **Third-Party Vendor Disruptions**: Failures by key vendors (e.g., cybersecurity tool providers, data center maintenance services) to meet their commitments could impact Novatech’s ability to deliver contracted services.
- **Security Breaches**: Unauthorized access to client data or systems could result in service interruptions, reputational damage, and non-compliance with data privacy commitments.

3.2 Environmental, Regulatory, & Technological Changes

3.2.1 Environmental Changes

Environmental changes refer to external market, economic, and global events that impact business operations:

- **Global Supply Chain Disruptions**: Ongoing geopolitical tensions and logistics challenges could delay the delivery of hardware (e.g., servers, network equipment) required for client projects and internal infrastructure upgrades.
- **Economic Downturn**: A potential global economic slowdown could lead to reduced client spending on IT services, impacting revenue targets and service expansion plans.
- **Energy Price Volatility**: Increases in energy costs could raise data center operational expenses, affecting profit margins and pricing strategies for client services.

试用水印

3.2.2 Regulatory Changes

Regulatory changes include updates to data privacy, cybersecurity, and labor laws that require compliance adjustments:

- **GDPR 2.0 Updates**: Proposed revisions to the EU General Data Protection Regulation (GDPR) include stricter data subject access request (DSAR) timelines and increased fines for non-compliance, requiring updates to data management processes.
- **California Privacy Rights Act (CCPA) Expansions**: Expanded rights for California residents (e.g., right to correct personal data) require changes to client data handling and documentation practices.
- **New Cybersecurity Regulations**: Several U.S. states (e.g., New York, Texas) have enacted new cybersecurity laws requiring enhanced security controls and incident reporting for businesses serving state agencies, impacting Novatech’s public sector clients.

3.2.3 Technological Changes

Technological changes include advancements, obsolescence, and emerging trends that impact service delivery and competitive positioning:

- **AI & Automation Advancements**: Rapid adoption of artificial intelligence (AI) and automation tools presents opportunities to improve service efficiency but also risks related to AI bias, data quality, and client resistance to technological changes.
- **Legacy System Obsolescence**: Novatech’s core client management system (CMS) and HRIS are approaching end-of-life, with vendor support ending in 2026. Failure to upgrade could lead to system failures and compliance gaps.
- **Emerging Cybersecurity Threats**: New ransomware variants and AI-powered cyberattacks pose increased risks to client and internal systems, requiring ongoing updates to security tools and employee training.

4. Risk Matrix (Likelihood vs. Impact)

The risk matrix below categorizes identified risks based on their likelihood (probability of occurrence, rated 1–5) and impact (consequence of occurrence, rated 1–5). Impact is measured across four dimensions: financial (revenue loss, fines), operational (service delivery disruptions), reputational (client trust, brand damage), and compliance (regulatory penalties). The combined likelihood-impact score determines the risk priority (High, Medium, Low).

试用水印

4.1 Risk Rating Definitions

Rating	Likelihood Definition	Impact Definition
1 (Low)	Unlikely to occur (probability < 10%)	Minimal impact: No SLA breaches, minor financial loss (< $50k), no reputational damage
2 (Low-Medium)	Possible but rare (probability 10–25%)	Minor impact: Limited SLA breaches, financial loss ($50k–$100k), minimal reputational damage
3 (Medium)	Possible (probability 26–50%)	Moderate impact: Significant SLA breaches, financial loss ($100k–$500k), moderate reputational damage,

		potential compliance penalties
4 (Medium-High)	Likely (probability 51–75%)	Major impact: Severe SLA breaches, financial loss ($500k–$1M), significant reputational damage, substantial compliance penalties
5 (High)	Very likely (probability > 75%)	Catastrophic impact: Critical service failures, financial loss > $1M, severe reputational damage, legal action, business continuity risks

4.2 Risk Matrix & Prioritization

Risk ID	Risk Description	Likelihood (1–5)	Impact (1–5)
R-001	GDPR 2.0 compliance gaps leading to fines and client data management issues	4	5
R-002	Legacy system obsolescence (CMS/HRIS) causing service disruptions and compliance gaps	5	4
R-003	AI-powered cyberattacks leading to client data breaches and service outages	3	5
R-004	Client billing fraud (e.g., overcharging, duplicate invoices) leading to financial loss and reputational damage	2	4
R-005	Global supply chain disruptions delaying hardware delivery for client projects	4	2

试用水印

R-006	Skilled labor shortages (cybersecurity/DevOps) impacting service delivery	3	3
R-007	Vendor payment fraud (e.g., fake vendor accounts) leading to financial loss	2	3
R-008	Economic downturn reducing client IT service spending	3	2
R-009	Energy price volatility increasing data center operational costs	4	1
R-010	Client resistance to AI/automation tools impacting service efficiency initiatives	2	2

5. Fraud Risk Assessment

This section assesses the likelihood and impact of fraud risks facing Novatech Solutions, including the potential effect on business objectives (e.g., revenue targets, client trust, compliance). Fraud risks were identified through a review of financial processes, internal audit reports, and industry fraud trends. All fraud risks have been formally evaluated by the Finance and Risk Management Departments.

5.1 Key Fraud Risk Areas

5.1.1 Client Billing Fraud

Risk Description: Intentional overcharging of clients, submission of duplicate invoices, or billing for unrendered services by employees with access to billing systems.

Likelihood: Low-Medium (2/5) – Existing controls (e.g., invoice approval workflows, client statement reconciliation) reduce the risk, but gaps in access controls for junior billing staff increase vulnerability.

Impact: Major (4/5) – Financial loss (estimated $100k–$300k per incident), severe reputational damage, client churn, and potential legal action.

Current Controls: Two-step invoice approval process; monthly client statement reconciliation; limited access to billing systems; annual financial audits.

Mitigation Actions: Implement automated invoice validation software to detect duplicates and overcharges; conduct quarterly surprise audits of billing records; provide fraud awareness training for billing staff.

5.1.2 Vendor Payment Fraud

Risk Description: Creation of fake vendor accounts or manipulation of existing vendor details to redirect payments to fraudulent accounts by employees with access to accounts payable systems.

Likelihood: Low-Medium (2/5) – Vendor onboarding requires multiple approvals, but lack of periodic vendor validation increases risk of fraudulent account creation.

Impact: Moderate (3/5) – Financial loss (estimated $50k–$150k per incident), reputational damage, and potential compliance issues related to anti-money laundering (AML) regulations.

Current Controls: Vendor onboarding approval workflow; vendor payment reconciliation; limited access to accounts payable systems.

Mitigation Actions: Implement vendor validation checks (e.g., cross-verification with public records); require dual authorization for vendor payment changes; conduct annual vendor audit to remove inactive or fraudulent accounts.

5.1.3 Data Theft for Fraudulent Purposes

Risk Description: Theft of client or employee PII (e.g., credit card details, social security numbers) by internal or external actors for identity theft, ransomware, or other fraudulent activities.

Likelihood: Medium (3/5) – Increasing cyber threats and potential insider threats (e.g., disgruntled employees) increase the risk of data theft.

Impact: Catastrophic (5/5) – Severe financial loss (ransom payments, regulatory fines), irreparable reputational damage, client trust erosion, and legal action.

Current Controls: Data encryption (at rest and in transit); access controls based on least privilege; security monitoring and incident response protocols; employee cybersecurity training.

Mitigation Actions: Implement advanced threat detection tools (e.g., user behavior analytics); conduct regular penetration testing; enhance insider threat monitoring; update incident response plans for data theft scenarios.

5.2 Fraud Risk Summary

Overall, Novatech faces moderate fraud risks, with the most significant threats being client billing fraud and data theft for fraudulent purposes. Existing controls are partially effective but require enhancement to address identified gaps. Mitigation actions focus on strengthening access controls, implementing automated detection tools, and increasing employee fraud

试用水印

awareness. The Risk Management Committee will review fraud risk mitigation progress quarterly.

6. Environmental & Technological Change Risk Assessment

This section provides a detailed assessment of the risks and opportunities presented by environmental and technological changes identified in Section 3.2, focusing on their potential impact on service commitments, business objectives, and competitive positioning.

6.1 Environmental Change Risks

6.1.1 Global Supply Chain Disruptions

Assessment: High likelihood (4/5) and moderate impact (2/5) – Ongoing geopolitical tensions and logistics challenges are expected to continue, delaying hardware delivery for client projects. This could lead to SLA breaches for time-sensitive projects, particularly for clients in the healthcare and financial services sectors.

Mitigation Actions: Establish relationships with multiple hardware vendors to reduce reliance on single suppliers; maintain a 3-month inventory of critical hardware components; communicate potential delays to clients proactively and adjust project timelines as needed.

试用水印

6.1.2 Economic Downturn

Assessment: Medium likelihood (3/5) and moderate impact (2/5) – A potential global economic slowdown could lead to reduced client spending on non-essential IT services (e.g., innovation projects, optional security upgrades). This may impact revenue growth but is unlikely to affect core service commitments (e.g., ongoing support).

Mitigation Actions: Diversify service offerings to include more essential services (e.g., compliance consulting, cybersecurity maintenance); develop flexible pricing models for clients facing financial constraints; focus on client retention through enhanced service quality.

6.2 Technological Change Risks & Opportunities

6.2.1 Legacy System Obsolescence

Assessment: Very high likelihood (5/5) and major impact (4/5) – Novatech’s core CMS and HRIS will lose vendor support in 2026, increasing the risk of system failures, data loss, and compliance gaps (e.g., inability to meet DSAR timelines). This directly threatens service commitments related to client data management and operational efficiency.

Mitigation Actions: Initiate a system upgrade project by Q2 2026; conduct a gap analysis to identify compliance requirements for the new systems; provide employee training on the new platforms to ensure seamless transition; develop a contingency plan to maintain service delivery during the upgrade.

6.2.2 AI & Automation Advancements

Assessment: Medium likelihood (3/5) and mixed impact – AI and automation present opportunities to improve service efficiency (e.g., automated client support, AI-powered security monitoring) but also risks (e.g., AI bias leading to incorrect service recommendations, client resistance to automation). The impact is moderate (3/5) overall, with potential benefits outweighing risks if implemented correctly.

Mitigation Actions: Develop an AI governance framework to address bias, data quality, and transparency; pilot AI tools with a small group of clients to gather feedback before full deployment; provide clients with options for human-led vs. automated services; train employees to work alongside AI tools effectively.

7. Risk Mitigation Plan

The table below summarizes the mitigation actions for all high and medium-priority risks, including assigned owners, timelines, and success metrics. Low-priority risks will be monitored quarterly for changes in likelihood or impact.

试用水印

Risk ID	Risk Description	Mitigation Actions	Assigned Owner
R-001	GDPR 2.0 compliance gaps	1. Conduct GDPR 2.0 gap analysis; 2. Update data management processes to meet new DSAR timelines; 3. Train employees on revised requirements; 4. Implement automated DSAR tracking system	Sophia Marie Gor (Compliance Ana
R-002	Legacy system obsolescence	1. Select new CMS and HRIS vendors; 2. Develop system upgrade project plan; 3. Conduct employee training; 4. Implement new systems and migrate data	Marcus James Re Infrastructure Ma
R-003	AI-powered cyberattacks	1. Implement advanced threat detection tools; 2.	Liam Alexander M (Cybersecurity Sp

		Conduct regular penetration testing; 3. Enhance employee cybersecurity training on AI threats; 4. Update incident response plan	
R-004	Client billing fraud	1. Implement automated invoice validation software; 2. Conduct quarterly surprise audits; 3. Provide fraud awareness training; 4. Enhance access controls for billing systems	Sarah Elizabeth M (CFO)
R-005	Supply chain disruptions	1. Establish multiple vendor relationships; 2. Maintain 3-month inventory of critical hardware; 3. Proactively communicate delays to clients	Jennifer Lee (CO

试用水印

8. Monitoring & Review

Novatech will monitor and review risks and mitigation actions on an ongoing basis to ensure the effectiveness of the risk management strategy. Key monitoring activities include:

- **Quarterly Risk Reviews**: The Risk Management Committee will conduct quarterly reviews of the risk register to update likelihood and impact ratings, assess progress on mitigation actions, and identify new risks.
- **Monthly Mitigation Progress Reports**: Assigned risk owners will submit monthly reports on the status of mitigation actions, including any delays or issues encountered.
- **Annual Full Risk Assessment**: A comprehensive risk assessment will be conducted annually to update this report and align risk management activities with changing business objectives, regulatory requirements, and market conditions.
- **Incident Reporting**: All risk-related incidents (e.g., security breaches, service disruptions, fraud attempts) will be reported to the Risk Management Department immediately, with post-incident reviews to update risk assessments and mitigation plans.

9. Approval & Sign-Off

This 2025 Annual Risk Assessment Report has been formally reviewed and approved by the Novatech Solutions Risk Management Committee, confirming that all identified risks have been evaluated and appropriate mitigation actions have been developed.
